

Succession Dataset – Field Dictionary

Data Sensitivity & Usage

The data contained in this dataset is **highly sensitive** and includes **Personally Identifiable Information (PII)** and **confidential talent assessment data**.

This dataset is intended **solely for approved People Analytics and succession planning purposes**. It must **not be shared, exported, or distributed** without **explicit authorization from the designated Data Stewards**.

All analyses and reports derived from this dataset must prioritize **aggregation, anonymization, and role-appropriate access**.

1. Position-Related Fields

Position_Code

- **Technical Name:** Position_Code
- **Description:** Unique identifier of the position being analyzed for succession.
- **Grain:** Position
- **Usage Notes:**
Primary key for position-level analysis. Used in position counts and coverage metrics.

Job Title

- **Technical Name:** Job Title
- **Description:** Official title of the position.
- **Grain:** Position
- **Usage Notes:**
Suitable for grouping and drill-down. Avoid using as a key due to potential duplicates.

Level

- **Technical Name:** Level
- **Description:** Organizational or leadership level of the position (e.g., Excomm Extended).
- **Grain:** Position
- **Usage Notes:**
Useful for executive segmentation and risk analysis.

Position_Business_Unit

- **Technical Name:** Position_Business_Unit
- **Description:** Business unit or organizational area where the position belongs.
- **Grain:** Position
- **Usage Notes:**
Primary slicer for organizational analysis.

2. Incumbent (Current Role Holder) Fields

These fields describe the **current employee holding the position**, not the nominee.

Incumbent_Id

- **Technical Name:** Incumbent_Id
- **Description:** Unique identifier of the employee currently occupying the position.
- **Grain:** Incumbent (person)
- **Sensitivity:** High
- **Usage Notes:**
Should be hidden from report view; used only for modeling or validation.

Incumbent Full Name

- **Technical Name:** Incumbent Full Name
- **Description:** Full name of the incumbent employee.
- **Grain:** Incumbent
- **Sensitivity:** Very High
- **Usage Notes:**
Should not be exposed in dashboards. Use only in restricted drill-throughs if required.

Incumbent_OU

- **Technical Name:** Incumbent_OU
- **Description:** Organizational unit of the incumbent employee.

- **Grain:** Incumbent
- **Usage Notes:**
Can differ from position business unit; useful for org structure analysis.

Incumbent_Date_Of_Birth

- **Technical Name:** Incumbent_Date_Of_Birth
- **Description:** Date of birth of the incumbent employee.
- **Grain:** Incumbent
- **Sensitivity:** High
- **Usage Notes:**
Should not be used directly in reports; used only to derive age.

Edad

- **Technical Name:** Edad
- **Business Name:** Incumbent Age
- **Description:** Age of the incumbent employee at time of data extract.
- **Grain:** Incumbent
- **Usage Notes:**
Used in mean and median age measures. Prefer age over DOB for privacy.

3. Nominee (Successor) Fields

These fields describe **potential successors**.

Nominee_User_ID

- **Technical Name:** Nominee_User_ID
- **Description:** Unique identifier of the nominee (successor).
- **Grain:** Nominee (person)
- **Usage Notes:**
Primary key for nominee-based counts and demographics.

Full Name Sucesor

- **Technical Name:** Full Name Sucesor
- **Description:** Full name of the nominee.
- **Grain:** Nominee
- **Sensitivity:** Very High
- **Usage Notes:**
Should not be shown on overview pages; restrict to drill-through.

Nominee_Gender

- **Technical Name:** Nominee_Gender
- **Description:** Gender of the nominee.
- **Grain:** Nominee
- **Expected Values:** M, F
- **Usage Notes:**
Used for DEI metrics (% Female / % Male Nominees).

Nominee_Date_of_Birth

- **Technical Name:** Nominee_Date_of_Birth
- **Description:** Date of birth of the nominee.
- **Grain:** Nominee
- **Sensitivity:** High
- **Usage Notes:**
Not currently used in measures; consider deriving nominee age if needed.

Nominee_Position_Title

- **Technical Name:** Nominee_Position_Title
- **Description:** Current job title of the nominee.
- **Grain:** Nominee

- **Usage Notes:**
Useful for bench profiling and talent pipeline analysis.

Nominee_Position_Code

- **Technical Name:** Nominee_Position_Code
- **Description:** Position code of the nominee's current role.
- **Grain:** Nominee
- **Usage Notes:**
Allows comparison between current role and target role.

Nominee_Business_Unit

- **Technical Name:** Nominee_Business_Unit
- **Description:** Business unit where the nominee currently works.
- **Grain:** Nominee
- **Usage Notes:**
Enables cross-BU mobility analysis.

4. Nomination (Relationship) Fields

These fields describe the **nomination event** between a nominee and a position.

Nomination_Readiness

- **Technical Name:** Nomination_Readiness
- **Description:** Assessed readiness level of the nominee to assume the target position.
- **Grain:** Nominee (business rule)
- **Expected Values:**
 - Right Now
 - Short Term
 - Medium Term
 - Long Term
- **Usage Notes:**
Used in readiness counts, percentages, and coverage metrics.

Nomination_Date

- **Technical Name:** Nomination_Date
- **Description:** Date and time when the nomination was recorded.
- **Grain:** Nomination
- **Usage Notes:**
Can be used for trend analysis if historical tracking is enabled.

Nominator_User_ID

- **Technical Name:** Nominator_User_ID
- **Description:** Identifier of the person who submitted the nomination.
- **Grain:** Nomination
- **Sensitivity:** High
- **Usage Notes:**
Generally excluded from reporting; useful for audit or workflow analysis only.

Succession Dashboard – Measure Dictionary

Business Rule: *Readiness is treated as a property of the nominee (person), while nominations may exist at position level.*

1. Nomination Volume & Population Measures

All Nominations

Definition:

Counts the total number of nomination records in the dataset. A single nominee may be counted multiple times if nominated for multiple positions.

What it answers:

“How many total nominations exist?”

Level: Nomination (row-level)

Count of Nominees

Definition:

Distinct count of unique nominee user IDs in the current filter context.

What it answers:

“How many unique people are nominated?”

Level: Person-level

2. Readiness – Nomination-Based Counts

These measures reflect **nomination volume**, not unique people.

Long Term Nominations

Definition:

Counts all nomination records where readiness level is **Long Term**.

Medium Term Nominations

Definition:

Counts all nomination records where readiness level is **Medium Term**.

Short Term Nominations

Definition:

Counts all nomination records where readiness level is **Short Term**.

Right Now Nominations

Definition:

Counts all nomination records where readiness level is **Right Now**.

3. Readiness – Nomination-Based Percentages

These percentages use **All Nominations** as the denominator and represent distribution of nomination volume.

% Long Term Nominations

Definition:

Percentage of all nominations that are classified as **Long Term**.

Calculation logic:

Long Term Nominations ÷ All Nominations

% Medium Term Nominations

Definition:

Percentage of all nominations that are classified as **Medium Term**.

% Short Term Nominations

Definition:

Percentage of all nominations that are classified as **Short Term**.

% Right Now Term Nominations

Definition:

Percentage of all nominations that are classified as **Right Now**.

4. Gender / DEI – Nominee-Based Measures

These measures operate at the **person level** and always use distinct nominees.

Nominees Female

Definition:

Distinct count of nominees whose gender is Female.

Nominees Male

Definition:

Distinct count of nominees whose gender is Male.

% Female Nominees

Definition:

Percentage of unique nominees who are Female.

Calculation logic:

Nominees Female ÷ Count of Nominees

% Male Nominees

Definition:

Percentage of unique nominees who are Male.

5. Position Coverage & Depth

Position Count

Definition:

Distinct count of unique positions in the current filter context.

Positions with Nominees

Definition:

Distinct count of positions that have at least one nominee assigned.

What it answers:

“How many positions have succession coverage?”

Succession Coverage

Definition:

Percentage of positions that have at least one nominee.

Calculation logic:

Positions with Nominees ÷ Position Count

Positions Ready Now

Definition:

Distinct count of positions that have at least one nominee with readiness level **Right Now**.

Ready Now Coverage

Definition:

Percentage of positions that have at least one **Right Now** ready nominee.

Calculation logic:

Positions Ready Now ÷ Position Count

6. Bench Strength / Depth Indicators

Nominee per Position Depth

Definition:

Average number of nominations per position, including duplicate nominees across positions.

Calculation logic:

All Nominations ÷ Position Count

What it answers:

“How deep is the nomination activity per role?”

Nominee per Position

Definition:

Average number of **unique nominees** per position.

Calculation logic:

Count of Nominees ÷ Position Count

What it answers:

“How broad is the bench per position?”

7. Demographics (Incumbent-Based)

These measures describe the **current incumbent population**, not nominees.

Mean Age

Definition:

Average age of incumbent employees holding the positions in scope.

Median Age

Definition:

Median age of incumbent employees holding the positions in scope.

Why it matters:

Median age is less sensitive to outliers and is preferred for executive risk discussions.
